

Allowable Costs for Data Management and Sharing

All allowable costs must be submitted in the budget for the award and must be incurred during the performance of the award, even for scientific data and metadata preserved and shared beyond the award period.

Note that all allowable costs submitted in budget requests must be incurred during the performance period, even for scientific data and metadata preserved and shared beyond the award period. For instance, if a DMS plan proposes preserving and sharing scientific data for 10 years in an established repository with a deposition fee, the cost for the entire 10-year period must be paid before the end of the period of performance.

Reasonable and allowable costs include:

Curating data and developing supporting documentation

Preserving and sharing data through established repositories, such as data deposit fees necessary for making data available and accessible

Formatting data according to accepted community standards, or for transmission to and storage at a selected repository for long-term preservation and access

De-identifying data

Preparing metadata to foster discoverability, interpretation, and reuse

Local data management considerations, such as unique and specialized information infrastructure necessary to provide local management and preservation (for example, before deposit into an

If the Data Management & Sharing (DMS) plan proposes deposition to multiple repositories, costs associated with each proposed repository may be included

Budget requests must not include infrastructure costs that are included in institutional overhead (e.g., F&A costs) or costs associated with the routine conduct of research.
